

Malware and File Policies:

- o In Cisco firepower FTD the Malware and File policies allow you to perform two main tasks.
- o Firstly, through Malware and File polices can control the flow of files through the network.
- o secondly can check these for malware using Cisco's Advanced Malware Protection feature.
- o In Cisco Firepower FTD the File control can be based on the file type, protocol and direction.
- o Wanted to prevent users downloading exe files, then this can be achieved with a file policy.
- o Advanced Malware Protection checks files for malware before passing files through firewall.
- o Advanced Malware Protection checks files for malware before passing files through firewall.
- o It does this by creating SHA256 hash of file & sending this to Cisco's AMP service for verdict.

Option	Description
Clean	The file was known about by AMP and is considered to be clean.
Unknown	The file has not yet been seen by AMP and is unknown. Often the case with zero-day exploits.
Malware	The file is known by Advanced Malware Protection AMP and is malicious.

Add Rule

Application Protocol: Any
Direction of Transfer: Any
Action: Block Malware
