

Cisco Email Security Appliance (ESA):

- o The Cisco IronPort Email Security Appliance (ESA) is an email security gateway product.
- o Designed to detect and block wide variety of email-borne threats, such as malware, spam.
- o Spam Filtering can be done by using Reputation based filtering or Context based filtering.
- o Cisco Email Security Appliance (ESA) provide protection of Emails using Email infrastructure.
- o The Cisco IronPort ESA can be easily integrated into deployed network with high flexibility.
- o The IronPort ESA can be deployed as single interface filtering Emails of internal Mail server.
- o Another method two interfaces, one for Emails from Internet and another from internal.
- o The Cisco IronPort Email Security Appliance (ESA) acts as a mail transfer agent in network.
- o The IronPort Email Security Appliance (ESA) is the destination of the public MX records.
- o ESA needs to be accessible through public Internet and should be first hop organization.

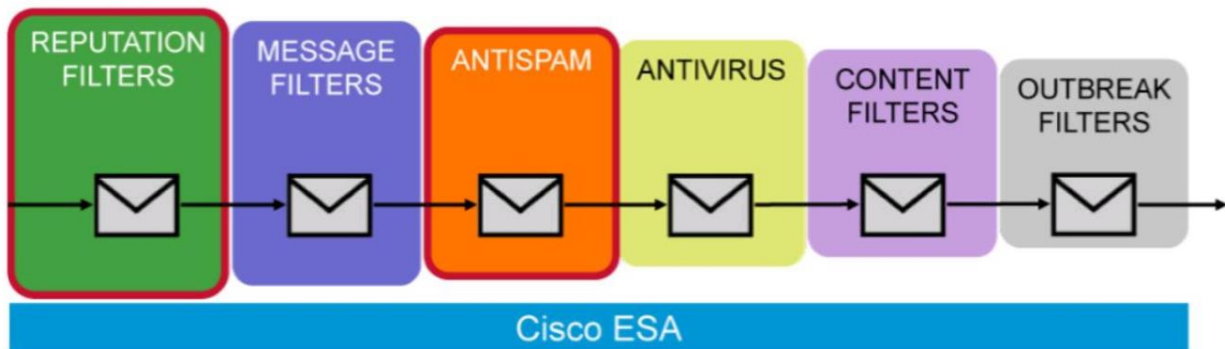

ESA Features and Functions:

Global Threat Intelligence:

- o Integrated solution ensures High performance & strong Email protection powered by Talos.
- o Solution Global Threat Intelligence Visibility provides real time footprint view over traffic.
- o In This solution hundreds of terabytes of Security intelligence information are handled daily.
- o Talos updates in every 3 to 5 mins updating millions of security devices connected through.

Spam Filtering:

- o Cisco ESA offers spam filtering using multi-layer filtering techniques using Reputation based.
- o ESA offers spam filtering using multi-layer filtering techniques using Context based filtering.
- o Contextual inspection, Auto classification and other filters and integration with Anti-virus.
- o In Cisco IronPort ESA Advanced Malware Protection (AMP) offers enhanced Spam filtering.

Graymail Detection:

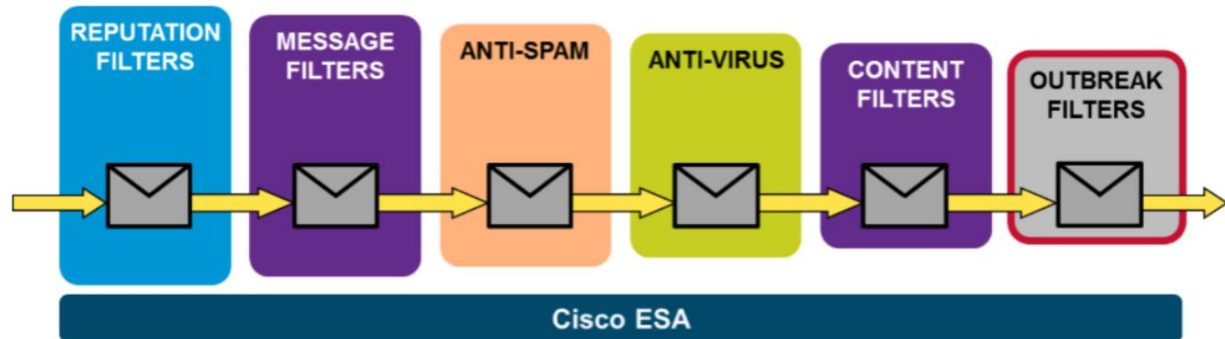

- o Graymail detection feature offers detection of graymails such as marketing emails etc.
- o Other exam of graymails such as advertising emails, and other number of emails etc.
- o Graymail offers Monitoring, Classification of these emails along with unsubscribe option.
- o Graymail detection and un subscription protects from Malware from unsubscribed link.

Advanced Malware Protection:

- o Cisco Email Security Appliance ESA also includes Cisco Advanced Malware Protection AMP.
- o Use AMPs feature, Sandboxing, Retrospection & continuous inspection can be done before.
- o Use AMPs feature, Sandboxing, Retrospection & continuous inspection can be done after.
- o In Cisco ESA Reputation scoring and blocking strengthen the reputation-based filtering.
- o The Advanced Malware protection also offers increased performance of blocking of attacks.
- o Advanced Malware protection offers tracking of suspicious activities, taking remediation.

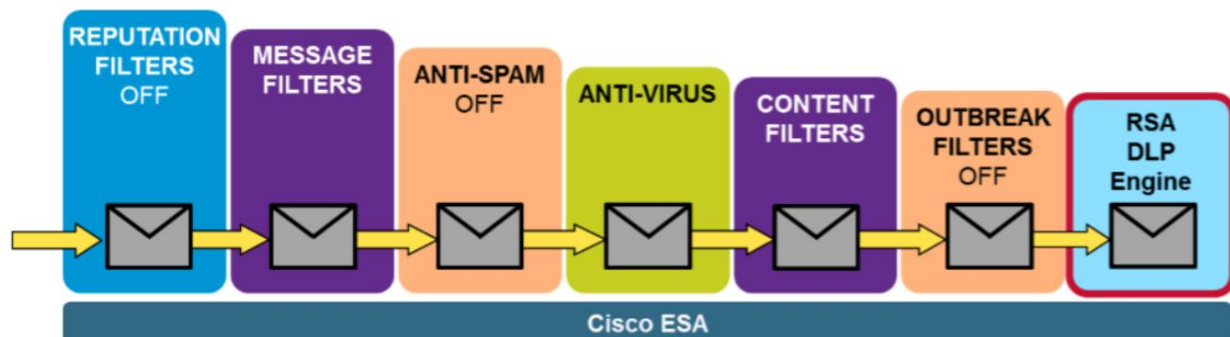

Outbreak Filters:

- o This filter provides defense to corporate network against threats like virus Outbreakers.
- o Outbreak filters provides defense to corporate network against phishing scams & malwares.
- o Anti-Malware & Anti-Virus software dependent upon software update to detect outbreaks.
- o Cisco updates in real-time provide Email Security Appliance most updated info Outbreakers.
- o In Ironport ESA the Outbreak Filters offers protection against message-based outbreaks.
- o Offers protection against non-viral threats, include phishing, scams & malware distribution.
- o By default, Outbreak Filters scans incoming and outgoing messages for possible threats.

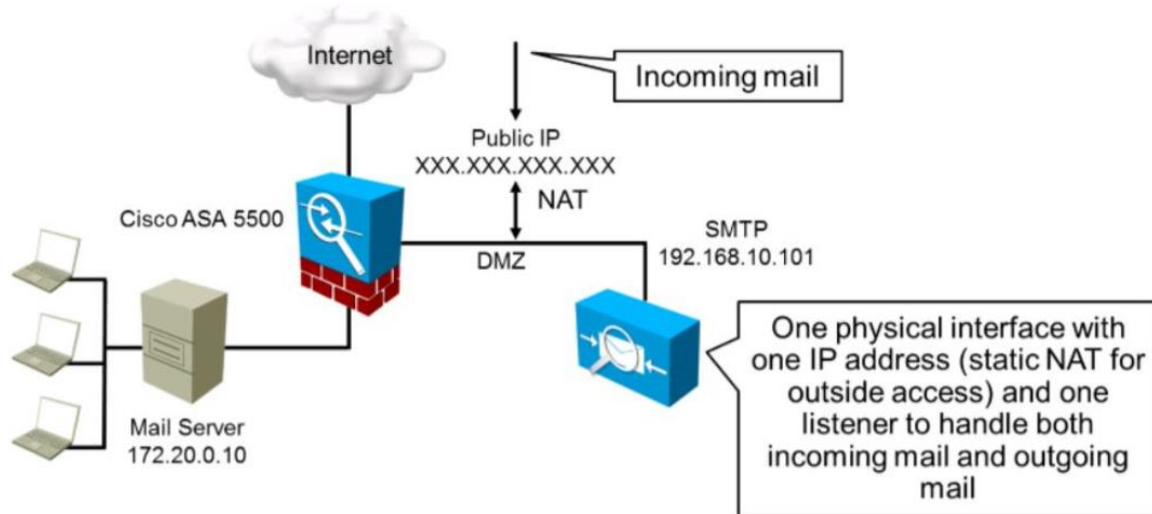

Data Loss Prevention (DLP):

- o Configuring DLP policies keep your personal, secret, and confidential information secured.
- o DLP feature which offers to prevent the leakage of information to outside the network.
- o Traditionally this information may include company or organizations confidential info.
- o Data loss Prevention feature also ensures the enforcement of compliance with the rules.
- o It ensures that this info will not leave the network based on the pre-configured policies.
- o Cisco Email Security DLP engine configured with DLP policies make few false positives.
- o Monitor classify violations by severity, offering app of different levels remediation action.
- o The DLP remediation action can also have configured to be taken in cases of violation.
- o DLP policies prevent user from intentionally or unintentionally send confidential info.

Flexibility:

- o Cisco ESA Solution offers ease of deployment that can be adjusted with every network.
- o Cisco ESA using System Setup wizard, even complex network can be controlled easily.
- o Cisco ESA Support of Virtual and Hardware deployment in a same deployment scenario.
- o Offers same level of security for local and remote locations of your corporate network.

Cisco Email Encryption:

- o The Cisco Email Encryption feature offers security in terms of encrypting the email traffic.
- o Encryption of email is associated with the configured encryption profile containing info.
- o This is regarding characteristics of encryption and key server identification information.

Reputation filters	Used to set up sender groups.
Message Filters	Custom rules that can compare any part of a message using regular expression (only available using the CLI).
Antispam	Uses preventive and reactive antispam applications to ensure maximum spam prevention.
Antivirus	Uses multiple virus protection software applications to ensure maximum virus prevention.
Outbreak Filters	Quarantines suspicious email messages, and holds the messages until an updated virus signature is available.
Content Filters	Receives connection requests from the SMTP client.
Encryption	Supports using a cloud-based managed encryption service to secure inbound and outbound email.
Data Loss Prevention	Prevents confidential data from leaving the customer networks.
