

Install Cisco ESA Version 10 on EVE-NG:

Open **WinSCP**, once you connected to WinSCP type the IP address of EVE-NG in host name choose the File Protocol: **SFTP**, Port number: **22**, User names: **root** and Password: **eve**.

The column on the left represent file on local machine and the column on the right represent files and folder on remote machine.

Go to the path **opt->unetlab->addons->qemu** on the remote machine.

Create directory under **/opt/unetlab/addons/qemu/** using the name: **phoebe-10-0-1-087-C000V**
copy the file downloaded file **hda.qcow2** to **phoebe-10-0-1-087-C000V** folder

Navigate to the folder from local to remote machine and upload. Once the process completed the file will be available immediately.

Or just unzip pre-prepared folder and drag it `/opt/unetlab/addons/qemu/` keep in mind when unzip inside folder there is the same folder again copy that one.

Save the configuration by fixing the permissions using the following command on EVE-NG.

`/opt/unetlab/wrappers/unl_wrapper -a fixpermissions`

Open the EVE-NG in the browser then 'Add an Object' and select the Node.

ADD A NEW NODE

Template

Cisco Email Security Appliance (ESA)

Number of nodes to add

1
