

Cisco DNA Center:

- o Cisco Digital Network Architecture (DNA) Center can help you bring it all together.
- o Cisco DNA Center can help you bring it all together to create an automated network.
- o Cisco DNA then continuously gathers data from multitude of sources devices & apps.
- o This information can then be analyzed to make sure the network is performing securely.
- o At its optimal level and in accordance with business intent, need and network policies.
- o DNA is a system that is constantly learning, adapting to support the business needs.
- o DNA Center is the foundational controller and analytics platform at heart of Cisco DNA.
- o Cisco DNA Center is a network management and command center for provisioning.
- o Cisco Digital Network Architecture (DNA) Center is the configuring network devices.
- o It is hardware & software platform providing a 'single-pane-of-glass' (single interface).
- o Digital Network Architecture Center focuses on assurance, analytics, and automation.
- o Need for intent-based networking is growing as more segments of business depend.
- o The Cisco DNA Center is a powerful network controller and management dashboard.
- o that lets take charge of network, optimize Cisco investment & lower your IT spending.
- o Full automation capabilities for provisioning and change management are enhanced.
- o With intelligent analytics that pull telemetry data from everywhere in the network.
- o Applications, services, and users are prioritized based on business goals, within policy.
- o Cisco DNA shortcomings in network, application, or device performance are flagged.
- o Cisco DNA center instant remediation guidance saves hours of the IT troubleshooting.
- o This interconnection of automation forms continuous validation-and-verification loop.
- o This interconnection checking alignment of network operation with business intent.
- o Cisco is adding open interfaces so that third-party technologies can be run on top of DNA.
- o This new Cisco DNA Center is an open, extensible platform for streamlining IT workflows.
- o This new Cisco DNA Center is an open, extensible platform for greater business innovation.
- o Digital Network Architecture Center is at heart of Cisco's intent-based network architecture.
- o Cisco DNA Center provides a centralized Management Dashboard to control Network.

Automate:

- o Save time by using single dashboard to manage and automate your network.
- o Quickly scale Digital Network Architecture business with intuitive workflows.
- o Configure & provision thousands of network devices across enterprise in minutes.

Secure Policy:

- o Deploy group-based secure access and network segmentation based on business needs.
- o With DNA Center apply policy to users & applications instead of to your network devices.
- o The Automation reduces manual operations and the costs associated with human errors.
- o Digital Network Architecture automation resulting in more uptime & improved security.
- o Assurance then assesses the network and uses context to turn data into intelligence.
- o Cisco DNA making sure that changes in the network device policies achieve your intent.

Assurance:

- o Monitor, identify, and react in real time to changing network and wireless conditions.
- o Cisco DNA Center uses your network's wired and wireless devices to create sensors.
- o Sensors everywhere, providing real-time feedback based on actual network conditions.
- o Cisco DNA Assurance engine correlates network sensor insights with streaming telemetry.
- o With a quick check of the health scores on the Cisco DNA Center main dashboard.
- o You can see where there is performance issue & identify most likely cause in minutes.

Extend Ecosystem:

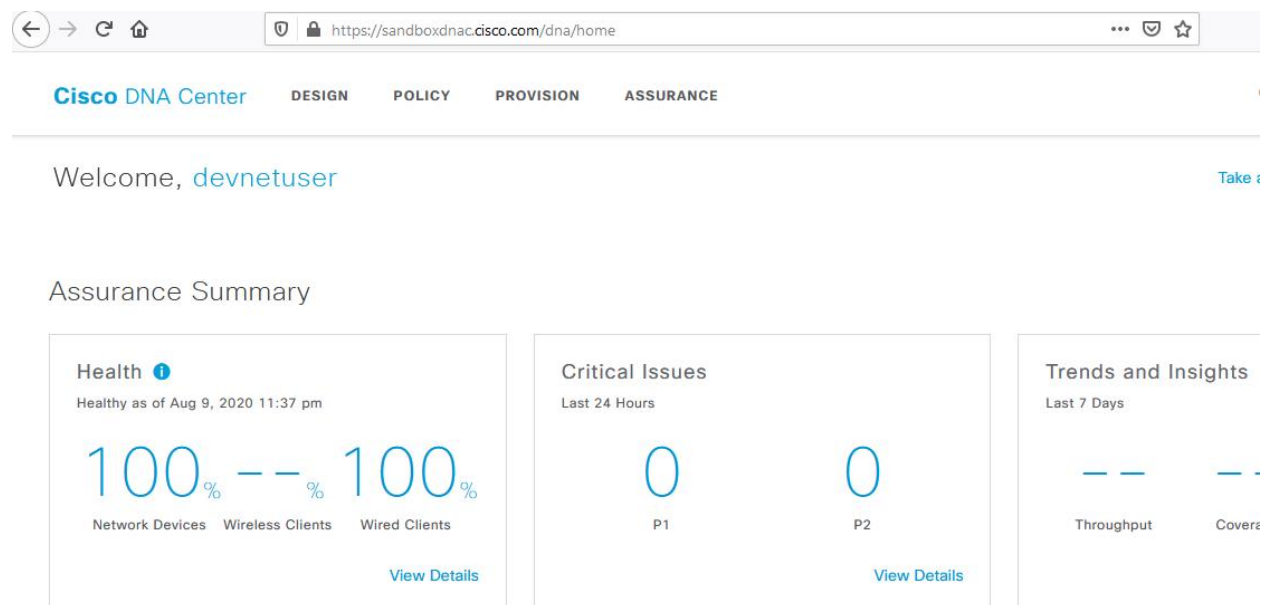

- o With the new Cisco DNA Center platform, IT can now integrate Cisco solutions.
- o And third-party technologies into single network operation for streamlining IT workflows.
- o Cisco DNA Center allows you to run the network with open interfaces with IT.
- o And business applications, integrates across IT operations and technology domains.
- o And can manage heterogeneous the network devices.

DevNet DNA Center Lab URL and Username and password.

<https://sandboxdnac.cisco.com>

User: devnetuser

Password: Cisco123!

Design:

- o Design layout like select city in Map and add building and design Network layout.
- o Model entire network, from sites & buildings to devices & links, both physical & virtual.

Policy:

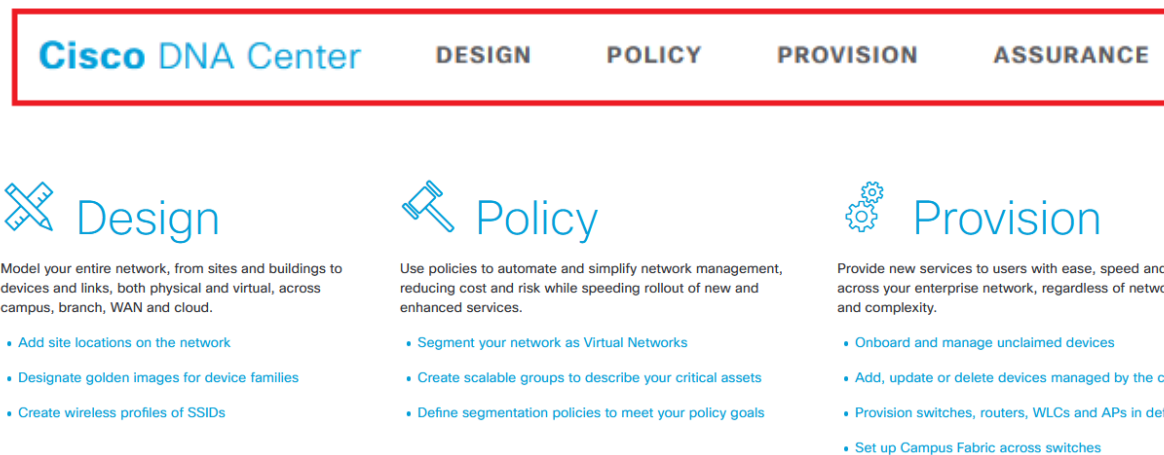

- o In policy can apply policy to that network devices and setup policy for different application.
- o DNA Center platform enables creation of application policies used to reflect organizations.
- o Use the policies to automate and simplify network management, reducing cost and risk.
- o In Cisco DNA Center use the Policy to speeding rollout of new and enhanced the services.

Provision:

- o In provision can installed network devices or can add and remove network devices.
- o Provide new services to users with ease, speed & security across enterprise network.
- o In Cisco Digital Network Architecture in Cisco regardless of network size & complexity.

Assurance:

- o This is we can do troubleshooting, can monitor the status of network & check health.
- o In Assurance can check Network health and can monitor the issue and get suggestion.
- o Use proactive monitoring and insights from the network, devices, and applications.
- o To predict problems faster and ensure that policy and configuration changes achieve.
