

FortiADC Version 7 Administrator

Successful completion of this course will enhance your understanding of how to configure and manage FortiADC. You will gain hands-on experience in installing, configuring, managing, maintaining, and monitoring FortiADC to optimize application delivery and secure network traffic. This course will prepare you with the skills needed to implement advanced load balancing, high availability, security features, and traffic management to enhance network performance.

FortiADC Course Description:

The FortiADC Version 7 Administrator Course provides IT professionals with the knowledge and skills needed to configure, manage, and optimize Fortinet's Application Delivery Controller (ADC) solution. This course covers key features such as server load balancing, SSL offloading, and security policies to ensure efficient application delivery, security, and performance. Through hands-on labs and real-world use cases, participants will gain practical experience in deploying, managing, and troubleshooting FortiADC appliances in enterprise environments.

Product Versions:

FortiADC Version 7.x

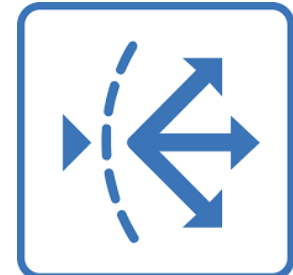

Outlines:

- Introduction to FortiADC
- Network configuration (interfaces & routing)
- Configure initial network and system settings
- Load balancing concepts and methods
- Configuring virtual servers and server pools
- HTTP and HTTPS load balancing
- Health checks and monitoring
- SSL/TLS offloading and certificate management
- Configuring application firewall and security policies
- Configure content routing and content rewrite
- Forwarding Methods and Network Address Translation
- Configure application profiles

Objectives:

By the end of this course, participants will be able to:

- ✓ Understand Basic Terminologies of FortiADC and key features
- ✓ Configure and manage load balancing for applications and services
- ✓ Secure web applications with SSL offloading and security policies
- ✓ Monitor, troubleshoot, and optimize FortiADC performance
- ✓ Configure initial network and system settings
- ✓ Configure application profiles
- ✓ Configure virtual servers, real servers, and server pools
- ✓ Configure content routing and content rewrite
- ✓ Configure the web application firewall (WAF)

Target Audience:

Security Engineers, Security Administrators, Security Operations Specialists, Security Analysts, Resellers, pre-sale System Engineers, System Integrators, System Admin and Support Staff.

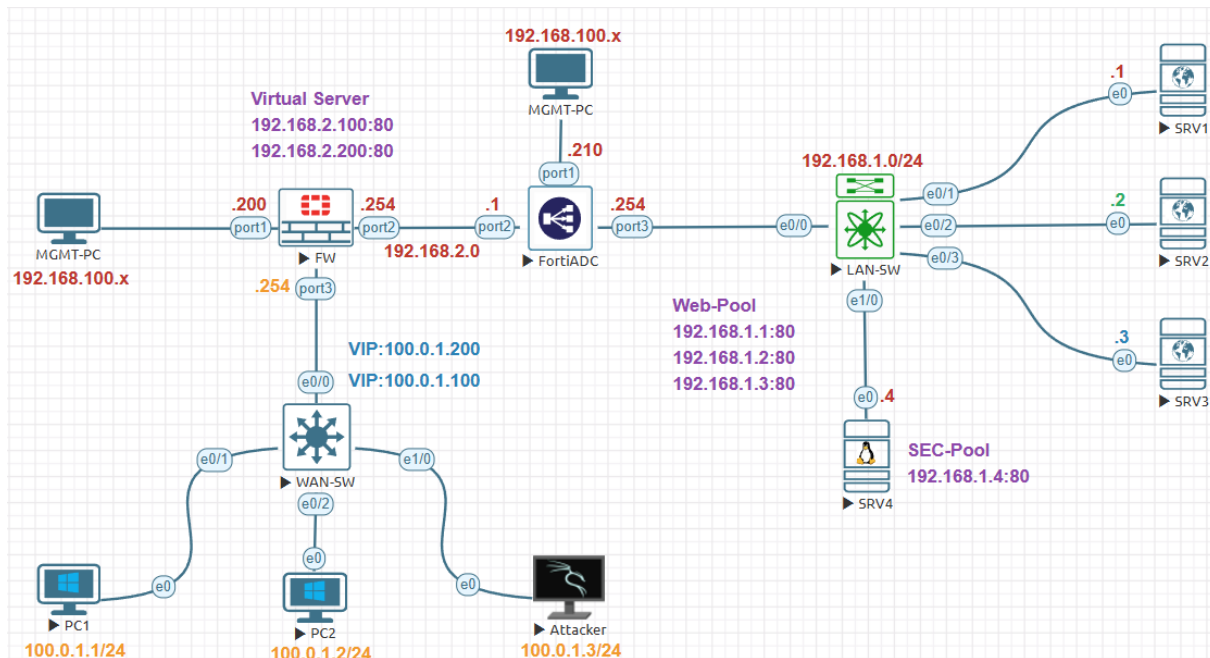

Prerequisites:

Participants should have:

- ✦ Basic knowledge of networking concepts (TCP/IP, DNS, Load Balancing)
- ✦ Understanding of security principles (SSL, Firewall policies)
- ✦ Familiarity with Fortinet products (recommended but not required)

Main Topology:

For Labs we will use below main topology.

Images	Description
FortiGate Firewall	fortinet-FGT-v7.0.9-build0444
FortiADC	fortinet-FAD-v7.4.0-build0308
Cisco Switches	i86bi_linux_l2-ipbasek9-ms.high_iron_aug9_2017b.bin
Linux Web Servers	linux-ubuntu-srv-16.04.4-webmin
Linux Server 4	linux-metasploitable-2.0.0
Attacker Kali Linux	linux-Kali-2023.1
Clients	Linux-slax-9.11.0/linux-mint-21.1
Internet Link	NAT Cloud or Management Cloud
