

Upload FortiADC in EVE-NG:

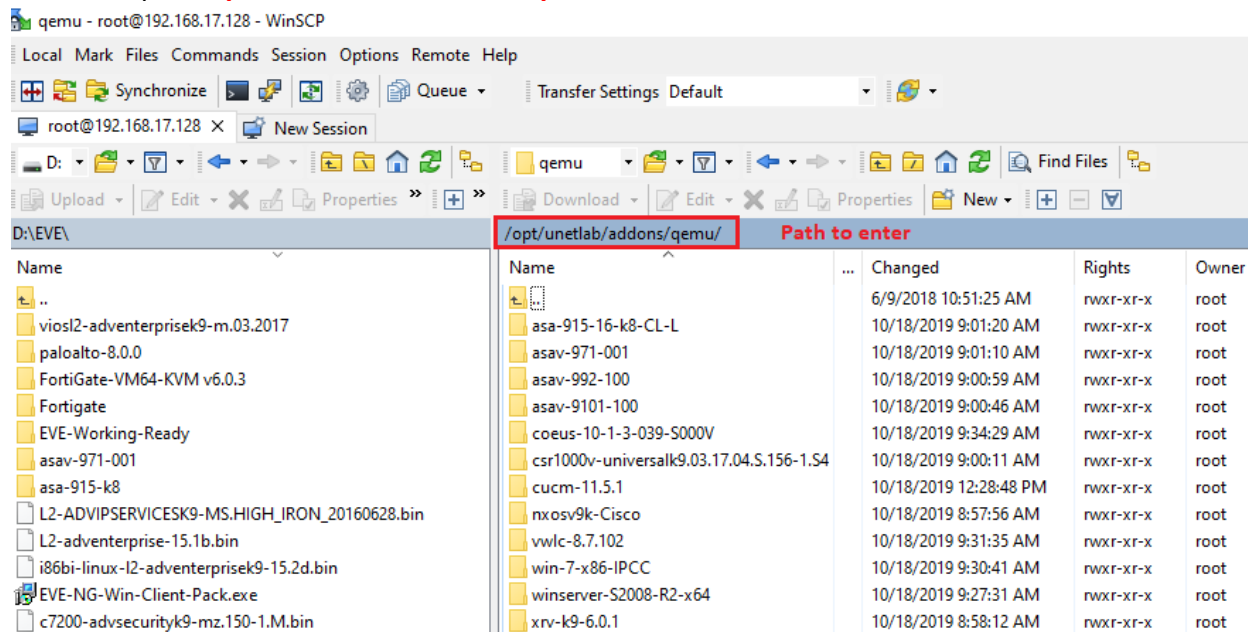

Open **WinSCP**, once you connected to WinSCP type the IP address of EVE-NG in host name choose the File Protocol: **SFTP**, Port number: **22**, User names: **root** and Password: **eve**.

The column on the left represent file on **local machine** and the column on the right represent files and folder on **remote machine**.

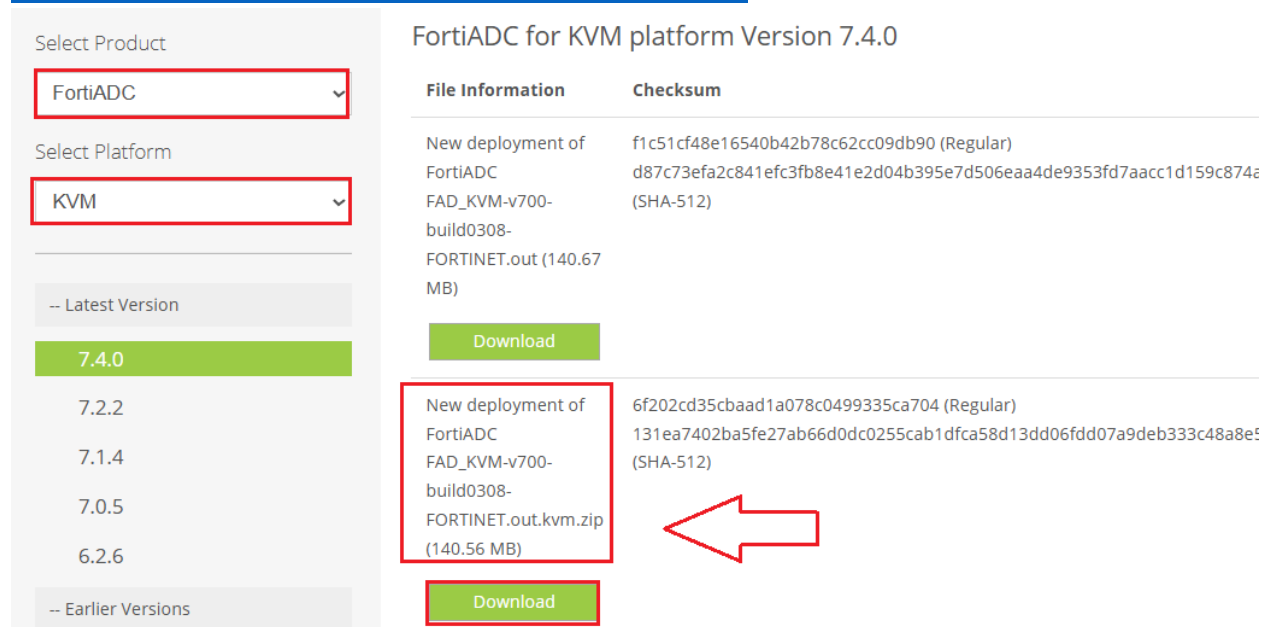

Go to the path **opt->unetlab->addons->qemu** on the remote machine.

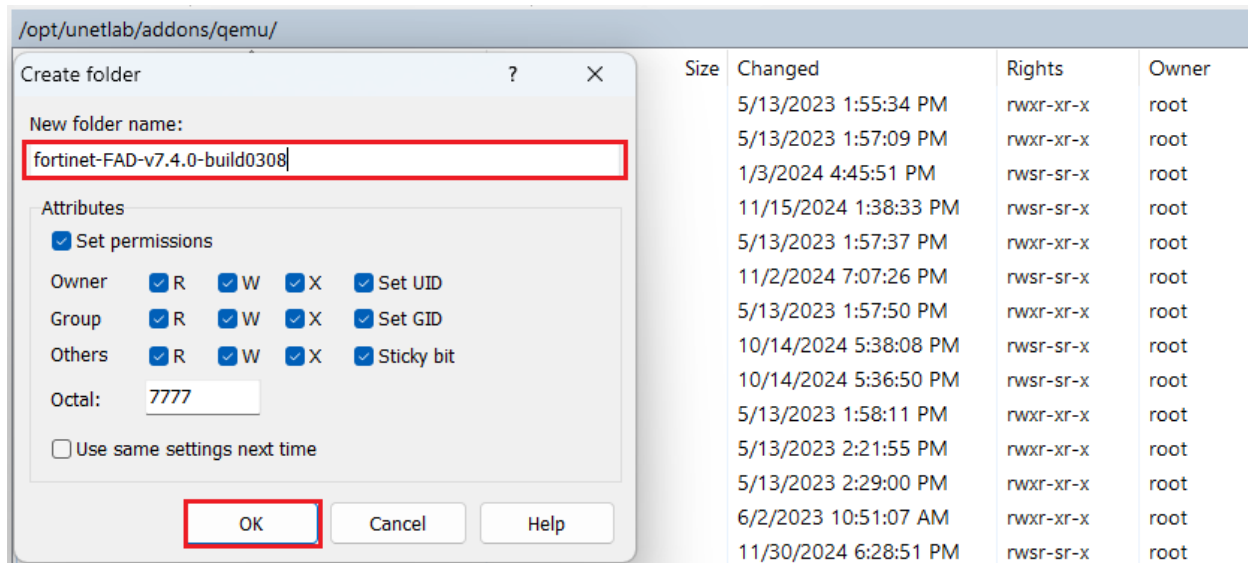

Download **FortiADC** KVM image from Fortinet support website from below link

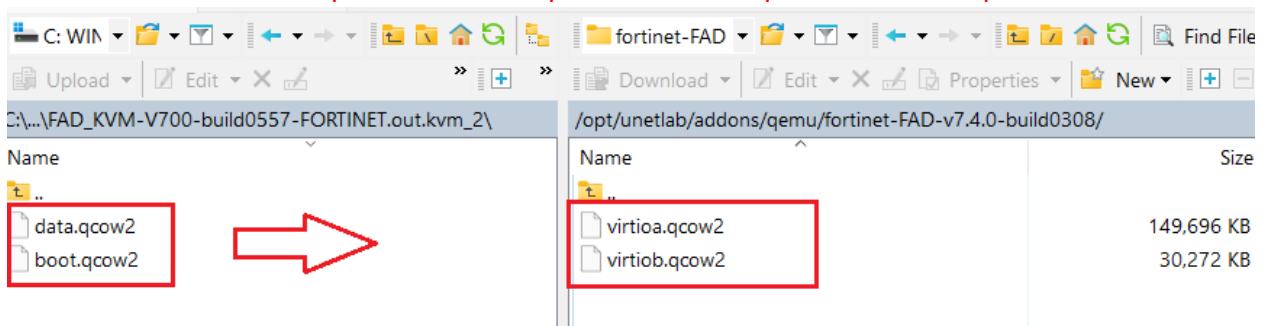

<https://support.fortinet.com/Download/VMImages.aspx>

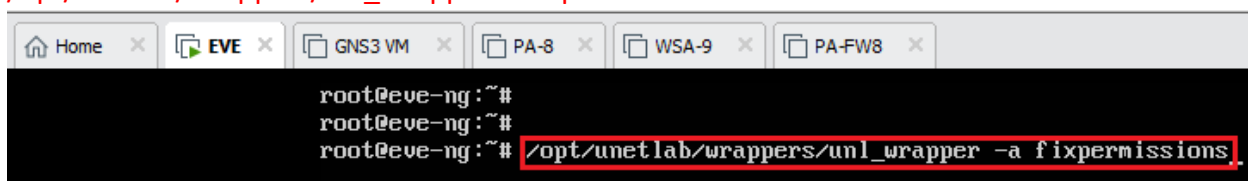

Create a directory using the name: **fortinet-FAD-v7.4.0-build0308**

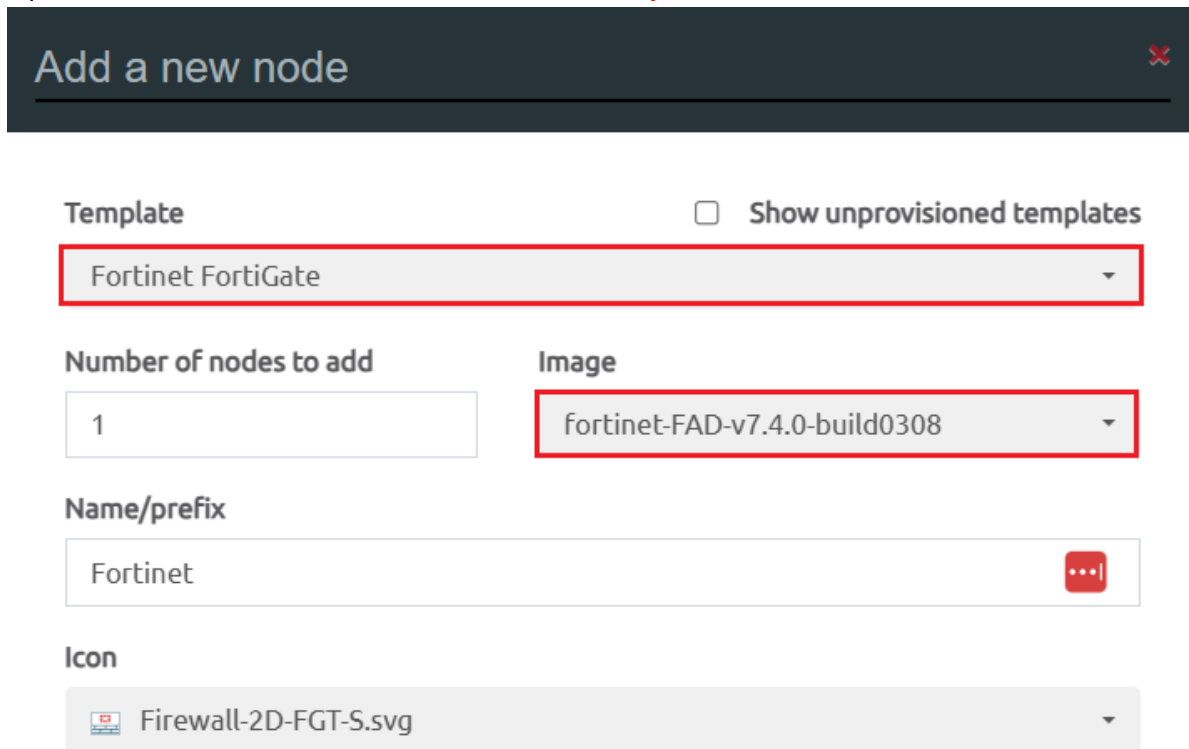

Copy the file downloaded from Fortinet support website to folder **fortinet-FAD-v7.4.0-build0308** rename **boot.qcow2** >> **virtioa.qcow2** and **data.qcow2** >> **virtioib.qcow2**

Save the configuration by fixing the permissions using the following command on EVE-NG.
/opt/unetlab/wrappers/unl_wrapper -a fixpermissions

Open the EVE-NG in the browser then 'Add an Object' and select the Node.

Add an object' and select the Network make Type **Management(Cloud0)** and press Save button.
