

## Fastest Response Load Balancing Lab:

|                                |                  |
|--------------------------------|------------------|
| Management Subnet              | 192.168.100.0/24 |
| FortiGate Management IP        | 192.168.100.200  |
| FortiADC Management IP         | 192.168.100.210  |
| Internal Servers Subnet        | 192.168.1.0/24   |
| FortiADC External Subnet       | 192.168.2.0/24   |
| FortiGate Firewall External    | 100.0.1.0/24     |
| FortiADC Internal IP Address   | 192.168.1.254    |
| FortiADC External IP Address   | 192.168.2.1      |
| FortiGate Firewall Internal IP | 192.168.2.254    |
| FortiGate Firewall External IP | 100.0.1.254      |
| SRV1 IP Address                | 192.168.1.1      |
| SRV2 IP Address                | 192.168.1.2      |
| SRV3 IP Address                | 192.168.1.3      |
| SRV3 IP Address                | 192.168.1.4      |
| Virtual Sever-1                | 192.168.2.100    |
| Virtual Sever-2                | 192.168.2.200    |
| FortiGate VIP-1                | 100.0.1.100      |
| FortiGate VIP-2                | 100.0.1.200      |
| External PC1 IP Address        | 100.0.1.1        |
| External PC2 IP Address        | 100.0.1.2        |
| External PC3 IP Address        | 100.0.1.3        |

Navigate to **Server Load Balance > Virtual Server** double click to open the setting.

Virtual Server

| Name   | Type    | Address       | Port |
|--------|---------|---------------|------|
| WEB-VS | Layer 4 | 192.168.2.100 | 80   |
| SEC-VS | Layer 7 | 192.168.2.200 | 443  |

Showing 1 to 2 of 2 entries 0 rows selected Show 25 entries

Go to **General** change the Method to **LB\_METHOD\_FASTEST\_RESPONSE** click **OK**.

Virtual Server

Basic General Security Monitoring

Configuration

Address 192.168.2.100  
Example: 192.0.2.1

Port 80  
Default: 80 Range: 0 or 1-65535. You can specify up to eight ports or port range e.g., 80-90 100. Valid values are from 0 to 65535, with 0 for Layer-4 virtual server

Connection Limit 0  
Default: 0 Range: 0-100000000 concurrent connections

Connection Rate Limit 0  
Default: 0 (disabled) Range: 0-86400 connections per second

Interface port2

Resources

Profile LB\_PROF\_TCP

Persistence Click to select.

Method LB\_METHOD\_FASTEST\_RESPONSE

Real Server Pool WEB-Pool

Before testing the **Fastest Response** load-balancing method, let's temporarily suspend the links for SRV1 and SRV2. After a while bring them back this will mark SRV1 and SRV2 as unhealthy.

Navigate to **FortiView>Virtual Server** Click on the Name column **WEB-VS** than Health Tab.

Test the virtual server by generating a significant amount of traffic against the virtual server. Open Attacker (Kali Linux) **100.0.1.3** machine open terminal and type below commands to generate traffic against the virtual server.

**`curl -s http://100.0.1.100?[1-100]`**

It hit **Server 3** only because it was healthy while Server 1 and Server 2 was unhealthy

Navigate to **Log & Report > Traffic Log > SLB Layer 4&2**

| Source    | Received Bytes | Destination   | Sent Bytes | Service | Virtual Server | Duration (s) | Trans Destination | Real Server |
|-----------|----------------|---------------|------------|---------|----------------|--------------|-------------------|-------------|
| 100.0.1.3 | 13260          | 192.168.2.100 | 46064      | tcp     | WEB-VS         | 3            | 192.168.1.3       | SRV3        |
