First let's verify Source NAT is configured from previously lab, if not configure it. Navigate to **Network > NAT > Source** click **Create New**

The screenshot shows the FortiGate web interface for NAT configuration. The left sidebar has 'Network' and 'NAT' highlighted. The main content area is titled 'Source' and '1-to-1 NAT'. It includes buttons for 'Delete', '+ Create New', and '+ Add Filter'. Below these is a table with the following data:

Name	Source	Destination	Egress Interface
SRV1-Internet	192.168.1.0/24	0.0.0.0/0	port2

Below the table, it says 'Showing 1 to 1 of 1 entries 0 rows selected Show 25 entries'.

Let's Test Source NAT is working **ping 8.8.8.8** from any three inside Servers.

```

root@SRV1:~# ping 8.8.8.8
PING 8.8.8.8 (8.8.8.8) 56(84) bytes of data.
64 bytes from 8.8.8.8: icmp_seq=1 ttl=114 time=69.0 ms
64 bytes from 8.8.8.8: icmp_seq=2 ttl=114 time=76.2 ms
64 bytes from 8.8.8.8: icmp_seq=3 ttl=114 time=66.6 ms

```

Click **Shared Resources > Address > Address**. Click the **Create New** to create new Address using following settings.

The screenshot shows the FortiGate web interface for Address configuration. The left sidebar has 'Shared Resources' and 'Address' highlighted. The main content area is titled 'Address Group' and 'Address'. It includes buttons for 'Delete', '+ Create New', and '+ Add Filter'. Below these is a table with the following data:

Testing & Verification:

Now try again from SRV1 **ping 8.8.8.8** is block while to ping any other destination in this case **ping 1.1.1.1** is working

```
✓ SRV1 x
root@SRV1:~#
root@SRV1:~# ping 8.8.8.8
